Rahya - Suchani (Bagla), District: Samba – 181143, Jammu (J&K)

संख्या: CUJ/Acad/34/2024/04 04 जनवरी, 2024

Notification /अधिसूचना संख्या 04 /2024

सभी पी.एच.डी. शोधार्थियों को 04.01.2024 से थीसिस लेखन (प्रारूप, टेम्पलेट, रंग आदि) के लिए अनुलग्नक-ए में दिए गए निर्देशों का पालन करने के लिए निर्देशित किया जाता है।

All the Ph.D. Research Scholars are directed to follow the instructions as given in the **Annexure-A** for Thesis writing (Format, Template, Colour etc.) w.e.f. 04.01.2024.

विभागों के विभागाध्यक्षों / केन्द्रों के निदेशकों से अपेक्षा की जाती है कि वे सभी शोधार्थियों के साथ-साथ संकाय सदस्यों को भी परिचालित करें और संदर्भ और सूचना के लिए इसे नोटिस बोर्ड पर भी प्रदशत करें।

The Heads of the Departments / Directors of the Centres are required to circulate to all the Research Scholars as well as Faculty Members and also to display the same on the Notice Board for reference and information.

इसे सक्षम प्राधिकारी के अनुमोदन से जारी किया जाता है।
This issues with the approval of Competent Authority.

Ph.D. Thesis Format

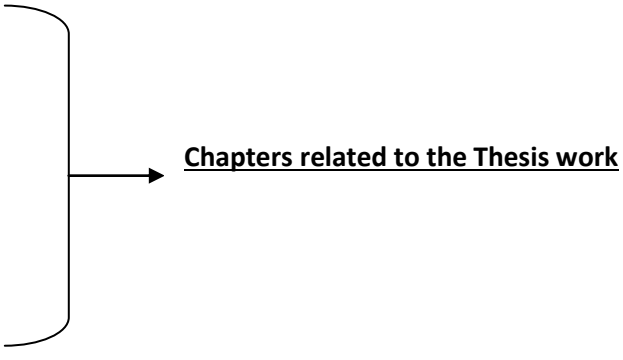

The Ph.D. thesis must be written in the prescribed format as mentioned below:

Printing Format: BOTH SIDE PRINTING
Type of Paper: Executive Bond
Font: Times New Roman
Minimum No. of Pages of the Thesis shall be - 110 & Maximum shall be – 250.
Format of Spine (Year, Title and Author)

- Thesis front(cover) page
- Title Page (bifurcated with a transparent sheet)
- Copyright(Backside of Title Page)
- Declaration by the Scholar
- Certificate by Supervisor
- MSP Certificate
- Dedication page(if any)
- Acknowledgement
- List of Symbols & Abbreviations
- Table of Contents / Index
- List of Tables
- List of Figures
- Abstract

Chapters

1. Introduction (shall include problem statement, objectives, hypothesis, Research methodology, scope, rationale, contribution and thesis outline)
2. Indian Knowledge System
3. Literature survey

CERTIFICATE

This is to certify that **Student Name**, Research Scholar in the Department of Computer Science & Information Technology, Central University of Jammu, under Reg. No. has completed her Ph.D. thesis entitled "**Title of the Thesis**". I have gone through the draft of the thesis and found it worthy of consideration in partial fulfillment of the requirements for the award of Doctor of Philosophy. It is further certified that:

- The thesis is worthy of consideration for the award of the Degree of Doctor of Philosophy and fulfills the requirements of the relevant ordinance.
- The thesis has not been awarded or submitted for the award of any other degree or diploma.
- The thesis embodies the original work of the scholar herself, consists of no plagiarism, and fulfills the requirements of the University Grants Commission (Promotion of Academic Integrity and Prevention of Plagiarism in Higher Educational Institutions) Regulations, 2017.
- The candidate has worked under my guidance and supervision for the period required under the relevant ordinance.
- The candidate has put in the required attendance and has participated in the seminars/group discussions in the department during the period, and the conduct of the scholar remained satisfactory during the period of her research.

MINIMUM STANDARD PROCEDURE (MSP) CERTIFICATE

This is to certify that **Student Name**, a bonafide research scholar of this department has submitted her Ph.D. thesis entitled, **"Title of the Thesis "**, on dated ……. This thesis is in accordance with UGC (Minimum Standards and Procedures for Awards of M.Phil./Ph.D. Degree) Regulations, 2016.

Supervisor **Head of the Department** **Dean**

SAMPLE

Acknowledgement

Indeed my words at my command are not adequate to express the depth of my modesty and humbleness before the almighty without whose endless magnanimity and blessings this majestic task could not have been accomplished.

I express my sincere gratitude to Hon'ble Vice-Chancellor Prof. Sanjeev Jain, Central University of Jammu, and Prof. Devanand, Dean, School of Basic and Applied Sciences, Central University of Jammu for their kind support extended to me for the successful completion of this research work.

I place on record unbounded gratitude to my Supervisor, Dr. Yashwant Singh, HoD, and Professor, Department of Computer Science and Information Technology, Central University of Jammu, J&K, India for their belief in me. In them, I found that the best are not only efficient, effective, and result driven, but at "core they are persons with best qualities as human beings". Humanity, scientific potentials, kindness, simplicity, and novelty of ideas are the arms of their great personality. I am greatly indebted to my supervisor for allowing me to work under his supervision and for his invaluable painstaking efforts taken toward my study.

I owe my thanks to my knowledge-rich teachers of the department, Dr. Bhavna Arora, Dr. Arvind Selwal, Dr. Deepti Malhotra, and Dr. Neerendra Kumar for their constant suggestions, motivation, and timely feedback during my research work.

A special thanks to Dr. Pradeep Singh and Dr. Nagesh Kumar for guiding me throughout this process and helping me at every level for further refinement of my work.

I also like to thank Mr. Jatinder Singh and Ms. Jyoti for their ever-welcoming nature and their technical assistance when needed.

The silver lining to all these efforts was drawn by my friends cum colleagues without whom I may not be able to withstand a single day of this long humongous journey. A heartfelt gratitude to Ms. Niharika Sharma, Ms. Deepika Sharma, Ms. Mehak Mengi and Mr. Amit

Sharma. It would be unfair if I fail to mention the presence of Dr. Deep Kumar Bangotra who has constantly assisted me to cross the hard journey of success and always stands by my side through rough and tough. I also like to thank my seniors Dr. Rohini Mahajan, Dr. Sonam Gandotra, Dr. Bhagyalaxmi, and Ms. Pooja Anand who always showers me with love and care. The moral support of my junior research scholars Ms. Sheerein Zadoo, Ms. Sheikh Imroza Manzoor, Ms. Abreen Sabha, Ms. Neha Koul, Ms. Sakshini Hangloo, Ms. Geeta Sharma, Mr. Ajay Kumar, Mr. Himanshu Sharma, Mr. Zakir Ahmad Sheikh, Mr. Kuljeet Singh, and Mr. Narinder Verma can never go unacknowledged. I wish them all the best in their future endeavors.

It will never be possible to pay the price of sacrifices that my parents have made for my success and the hardships they have gone through during my study. The devoted prayers of my mother Smt. Kamlesh Kumari and dreams of my father Sh. Sukh Raj have made me accomplish this task in distress. Last but not least, my siblings especially Mr. Vishal Rana with their never-ending faith in me and my capabilities cannot be put in words. Their imperceptible blessings have made me sail through the toughest times.

- *The merits in the thesis are by virtue of all the acknowledged people and the shortcomings are my own copyright.*

Abstract

The ever-growing ubiquitous IoT network encompasses tiny objects to giant machines that communicate with each other via the internet. IoT technology offers people-centric and industry-centric services on demand. Miniaturized sensors play an important role in an IoT network. The Internet protocol (IP) based smart sensors could be deployed in an unattended or harsh environment for so long due to their inherent features. The sensors in an IoT network are used for measuring temperature, humidity, motion, seismic activities, underwater events, and mining fields. The resource-constrained nature of IoT nodes such as computation, storage, and battery power limited the data transmission to longer distances. The smart nodes in IoT are lossy and support minimum data rates of tens to hundreds of kilobits per second (Kbps). The data sensed by sensor nodes is sent to the base station or sink node by traversing through multiple hops called routing. The routing of data through multiple hops is the most energy-consuming process because of the maximum resource utilization during data delivery to respective destinations. Likewise, inefficient data delivery encounters challenges like more delay due to congestion, insecurity, scalability, and heterogeneity of devices. All these factors hamper the energy efficiency of an IoT network.

The radio frequency-based sensors manage energy consumption by turning off and on their radios periodically. This process of preserving energy by activating and deactivating the sensor nodes is called duty cycling. The existing duty cycling techniques often waste more energy due to issues like overhearing, over-emitting, and idle listening. The Institute of Electronics and Electrical Engineering (IEEE) 802.15.4 superframe structure only supports fixed duty-cycling and cannot be dynamically adapted. Therefore, devising adaptive and efficient duty-cycling techniques is of greater significance in dynamic IoT networks. On the other hand, prevalent routing techniques suffer from single source problems, connection loss, unicast transmission, and mobility issues. Such types of routing techniques are not a good fit for IoT networks which are highly dynamic. The metaheuristic routing techniques are gaining higher acceptance for accomplishing energy efficiency because of the overall improvement in Quality of Service (QoS) metrics such as delay, packet loss ratio, network lifespan, throughput, energy consumption, and goodput.

The “Meta” means to reach the higher state and heuristic means to explore the search space by hit and trial beyond the local minimum. Taking into consideration the energy consumption issue during routing and excessive radio dissipation of smart nodes in heterogeneous IoT networks, we have proposed a high-level energy-efficient metaheuristic routing framework along with an adaptive duty cycling mechanism. The Duty Cycling mechanism activates or deactivates the nodes on sensing the data on demand. The wake-up radio scheme employs the low radio receiver to wake up the nodes only when required. The proposed duty-cycled improved ant colony mechanism (DC-ACO) in our thesis work is compared against three techniques i.e. IEM-ACO, ESR, and MAP-ACO. Ant colony routing is one of the metaheuristic approaches being motivated by the ant’s behavior to find the food source via the shortest tour depending on the pheromone intensity. The same ideology has been followed for route identification in an optimistic manner in our thesis work. The improved ACO takes into account the mobility/speed of nodes, residual energy, minimum, and average energy, and hop distance which are the critical parameters for a network like IoT.

The proposed DC-ACO approach could be successfully applied in distributed and dynamic applications like Vehicle Routing, Traffic Management, E-Healthcare, Travelling Salesman, Scheduling Problems, and Connection and connectionless network routing. In our thesis work, the application of DC-ACO is evaluated in Smart Healthcare System with special emphasis on the priority of data packets based on the criticality of data i.e. DC-ACOP. The Healthcare data packets are categorized based on the severity of data i.e. high, very high, low, and very low priority. The 3 bits are used for setting the priority. The highly prioritized data is delivered first to the destination node to minimize energy consumption and delay so that the medical services will be availed on time. The DC-ACOP approach is compared with PEERP, PriNergy, and PBR to determine the efficacy of the algorithm in terms of key performance indicators such as delay, throughput, energy consumption, and network lifetime.
