## DEPARTMENT OF MATHEMATICS CENTRAL UNIVERSITY OF JAMMU

| TEACHING PLAN |  |  |
| :--- | :--- | :---: |
| Course Title: | Numerical Analysis |  |
| Course Code: | MAMT- 104 |  |
| Course Instructor: Dr. Deep Singh | Maximum Marks: 100 |  |
| Lecture 1 | Errors and Numerical solutions of algebraic equations |  |
| Lecture 2 | Concept of approximate numbers |  |
| Tutorial | Assignment/discussion/exercises |  |
| Lecture 3 | Significant digits, Scientific notation |  |
| Lecture 4 | Absolute and relative error |  |
| Tutorial | Assignment/discussion/exercises |  |
| Lecture 5 | Normalized floating point numbers |  |
| Lecture 6 | Solution of algebraic equations using the method of iteration |  |
| Tutorial | Assignment/discussion/exercises |  |
| Lecture 7 | Newton Raphson method and examples |  |
| Lecture 8 | Rate of convergence of iterative methods |  |
| Tutorial | Assignment/discussion/exercises |  |
| Lecture 9 | System of linear algebraic equations and Gauss elimination method |  |
| Lecture 10 | Gauss-Seidel methods and examples |  |
| Tutorial | Assignment/discussion/exercises |  |
| Lecture 11 | Matrix Inversion method and examples |  |
| Lecture 12 | Jordan's Method and examples |  |
| Tutorial | Assignment/discussion/exercises |  |
| Lecture 13 | Norms of matrices and their examples |  |
| Lecture 14 | Condition number of matrices, ill conditioned systems and examples |  |
| Tutorial | Assignment/discussion/exercises |  |
| Lecture 15 | Results/analysis of convergence of iterative methods |  |
| Lecture 16 | Constructing an algorithm based on Gauss elimination method |  |
| Tutorial | Assignment/discussion/exercises |  |
| Lecture 17 | Finite differences: Forward, backward and divided difference operators |  |
| Lecture 18 | Results on Forward, backward and divided difference operators |  |
| Tutorial | Assignment/discussion/exercises |  |
| Lecture 19 | Newton's interpolations and examples |  |
| Lecture 20 | Lagrange's interpolations and examples |  |
| Tutorial | Assignment/discussion/exercises |  |
| Lecture 21 | Spline's interpolations and examples |  |
| Lecture 22 | Different types of approximations: Least square polynomial approximation |  |
| Tutorial | Assignment/discussion/exercises |  |
| Lecture 23 | Polynomial approximation by use of orthogonal polynomial |  |
| Lecture 24 | Approximation with Chebyshev polynomial |  |
| Tutorial | Assignment/discussion/exercises |  |
|  |  |  |

| Lecture 25 | Numerical integration and examples |
| :--- | :--- |
| Lecture 26 | topic continued |
| Tutorial | Assignment/discussion/exercises |
| Lecture 27 | Newton's cotes of integration trapezoidal |
| Lecture 28 | Exercices on Newton's cotes of integration trapezoidal |
| Tutorial | Assignment/discussion/exercises |
| Lecture 29 | Simpson's 1/3 rd and 3/8 rules |
| Lecture 30 | Exercises on Simpson's 1/3 rd and 3/8 rules |
| Tutorial | Assignment/discussion/exercises |
| Lecture 31 | Gaussian quadrature formula |
| Lecture 32 | Exercises on Gaussian quadrature formula |
| Tutorial | Assignment/discussion/exercises |
| Lecture 33 | Numerical solutions of ODE using Picard method |
| Lecture 34 | topic continued |
| Tutorial | Assignment/discussion/exercises |
| Lecture 35 | Numerical solutions of ODE using Euler's method |
| Lecture 36 | topic continued. |
| Tutorial | Assignment/discussion/exercises |
| Lecture 37 | Numerical solutions of ODE using Modified Euler's method |
| Lecture 38 | Numerical solutions of ODE using Runge-Kutte method |
| Tutorial | Assignment/discussion/exercises |
| Lecture 39 | Second and fourth order multistep method-Milne method |
| Lecture 40 | topic continued |
| Tutorial | Assignment/discussion/exercises |
|  |  |
|  |  |
